

BED BUG MONITORING

1 IN 5 HOTELS DEAL WITH AN INCIDENCE OF BED BUGS EACH YEAR

As international travel has increased, so too has the **incidences of bed bugs in Irish hotels**. While no reflection on the cleanliness of a premises, the reputational and physical damage of a bed bug infestation can be devastating. The losses due to an infestation have been estimated to be on average €65,000*

Averaging the size of an apple seed, bedbugs **hide in the cracks and crevices** of beds, box springs, headboards, bed frames, skirting boards etc. **coming out at night** to feed on your guests as they sleep. **Difficult to detect**, inspection takes time your housekeeping staff do not have.

ELIS CONNECT PROVIDES 24/7 MONITORING WITH LIVE ALERTS HIGHLIGHTING BED BUG ACTIVITY

*Max Malka, Dec 2021, based on a 200 room hotel - www.hospitality.net

ELIS CONNECT

The bed bug monitoring units are wireless, discreetly fitting beneath a mattress. Our technicians can fit units within minutes providing LIVE alerts of activity. 24/7 monitoring ensures our sensors will record activity as it occurs, allowing for early detection that ensures an infestation is contained, preventing spread to other rooms. Once activity is noted our expert technicians will be onsite, to advise on the best treatment strategy for your premises.

An incidence of bedbugs can be a costly, and can destroy the reputation of a hotel

- › **Time and energy** must be spent dealing with this damaging issue by your management team
- › **Loss in revenue** as your rooms undergo treatment
- › **Loss in potential earnings** due to reputational damage
- › **Loss in productivity** by your housekeeping team
- › **Cost of replacement** fixtures after an infestation
- › **Cost of compensation** to affected customers
